

MemoryCart AI - Frequently Asked Questions (FAQ)

Q1: What is MemoryCart?

MemoryCart is a next-generation smart e-commerce platform integrated with local and long-term memory support capabilities. Our built-in AI agent retains context about past support queries, orders, and refund requests, ensuring customers enjoy a cohesive, seamless customer service experience without having to repeat their context.

Q2: How can I track or check my order status?

You can request order status updates directly from the AI chat agent. Simply specify your order number (for example, ORD1001) in your message, and the agent will retrieve the latest shipping status, product name, and expected delivery date for you.

Q3: How do refund claims work?

If you request a refund, our system processes it according to our policy guidelines. Once a refund is initiated, you can track it via the refund reference ID (e.g., REF1001) through the chat console. The agent will retrieve the exact amount and refund status instantly.

Q4: Can the support agent remember my previous issues?

Yes! MemoryCart utilizes Hindsight memory architectures along with a relational database. This allows the AI agent to retrieve and reflect on recent conversations, previous order issues, or refund claims automatically.
